Are you looking for new Career Goal

We will give you a new opportunity in a new way.

We provide a complete Rhino training program, comprising three levels of courses on 3D modeling with Rhino, Jewelry Design with RhinoGold, rendering course, as well as custom, on-site, and individual training. Our scheduled courses are conducted in small groups (2-6 students) in a spacious computer lab with a separate workstation for each student. In our training, we put emphasis on each student's thorough understanding of the covered material. We apply an individualized approach for each student so that everybody is able to thoroughly understand performed exercises and proceed at their own pace. Therefore, nobody has to rush to catch up with somebody else or wait until other students complete their assignments. Our graduates receive a certificate upon completion of each course.
